Test Comments: *Rainfall shut off in early July and the site did not get a shower until mid-August. This corn crop started well but quickly went downhill during the hot and dry summer months. Most hybrids only reached six feet in height with ear placement close to the ground. Amazingly there were very few barren plants, just short kernels and small sized ears. Overall test ranking is 5 of 10. (10=best)*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
