**Test Comments:** *Standability was an issue here. Corn was planted in good soil moisture and emergence was excellent. Corn looked fantastic through July. Wet soils most all summer led to shallow root growth. Heavy rain and strong winds in late July and August laid over some hybrids at the root level, others broke at the knees (anthracnose stalk rot noted). Most hybrid yield loss was proportional to the lodging score.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
