LSD (0.25) = 15.1 0.2 ns

Test Comments: *We had a timely planting date and the area had really good planting conditions. A little cool and dry weather after planting and when we did stand counts on June 20th. At harvest, we had about six feet tall stalks that seemed healthy and stood straight. The ultra early test had a soil depression in the middle of the test that caused some yield variability.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
