Test Comments: John commented that his April 17 planting received over 16" of rain within days. Twenty-one days later, he was happy to find that it all emerged. His corn surrounding the tests averaged 170-190 bpa. Weather delayed planting of the trials. John said his farm received only 0.1 to 0.2" rain from showers in July and August. Ear development varied in size by hybrid. Lodging was mostly of stalks.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
