Test Comments: *This was a nice plot. Good emergence resulted in good stands. Growth and development through pollination was very good. Unlike many Michigan plots, particularly to the south, this site caught some rain during grain fill but probably had more potential, with more rain. Stalk quality and standability was excellent even with the relatively late harvest date.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
