**Test Comments:** *This plot is located on a slightly rolling spot. There was a significant hail even here on June 11. The corn was beat up pretty good but rebounded very well. During a September site visit, corn showed some signs of nitrogen deficiency. The corn was standing well and final stand lower in a few spots. Weed control was very good. One full-season replication removed due to variable yields.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
