Test Comments: *Planting into a no-till seedbed with adequate, but not excessive moisture, provided good seedling emergence. August 1 site observations showed significant heat and drought stress in the tests. Cooler temperatures and moisture followed the rest of August, relieving the stress a bit. Good stalk quality and minimal lodging at harvest. Yields were highly variable, due to stress, thus data rejected.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
