Yield & Income Factors: Base Moisture = 15.0% Shrink = 1.3 Drying = \$0.025 Prices: GMO = \$2.69; non-GMO = \$2.69

Test Comments: For much of this area, the growing season being significantly drier than average. This site was an estimated 40% drier than the ten year average. From planting through August, rainfall was only 3.67". Area yields are higher than expected, with grain being drier than expected too. Stalk lodging was an issue for some hybrids and impacted yield due to ears not feeding into the combine.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
