**Test Comments:** *This test was planted into a clean seed bed. A cold wet period after planting slowed emergence and slightly lowered stand count numbers. Dry weather was the story here, this site missed several key rain events throughout the summer. Plants were short, ear placement was low, some ears were small enough that they went right through the corn head.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different

**Test Comments:** *This test was planted into a clean seed bed. A cold wet period after planting slowed emergence and slightly lowered stand count numbers. Dry weather was the story here, this site missed several key rain events throughout the summer. Plants were short, ear placement was low, some ears were small enough that they went right through the corn head.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
