Test Comments: *Good soil moisture at planting started the corn crop off nicely. Early summer was almost too wet with some nitrogen not being there when needed, sidedressing was a good idea this year. Late August and September was dry which took some top yield potential away from the later maturity hybrids. Corn was standing nicely at harvest. Overall rating of the plot was a 8 out of 10. (10=best)*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
