Test Comments: *This site was planted into strip-tilled ground on May 13. The area received 1 inch of rain in June that was pretty isolated and helped boost yield over areas that remained dry. Corn plants were standing well, completely intact, and stood consistently close to 10 feet tall at harvest. Ears were filled with deep heavy kernels. High yields and good data this year, despite nearby dry conditions nearby.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
