Test Comments: *This site endured 6 weeks from shortly after emergence to pollination without measurable rain. A shower during the pollination timeframe helped make surprising yields and good moisture later in the season put good weight on the kernels that were pollinated. The moisture stress during vegetative stages limited plant height which helped provide good standability.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
