Exceptional drought persisted well into August. Plants had small ears with few kernels and poor stalk quality. Yield of the surrounding field was 25 bu/a. Doug said that his corn 2 miles from here did not produce any ears.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
