**Test Comments:** *This plot was planted into corn residue, putting it at yield disadvantage. The area experienced drier and warmer than average conditions this summer. Matt, our plot host, said that the dry conditions played the biggest factor in yield. Most area fields averaged around 150 BPA with top yields in fields reaching 180 BPA. At harvest, ears had minor tip die-back and small shallow kernels.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
