TEST COMMENTS: *To say this area was wet all season is putting it mildly. Total rainfall from beginning May through end of Sept resulted in 38.25." That's 16.5" over the 30-yr average during those months. Soil saturation for extended periods stunted growth overall, however, this site drains very well and plants set good pod clusters all the way to the top. Very little lodging was observed and appeared variety specific.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
