TEST COMMENTS: Emergence was excellent at this location and beans were good and uniform when they were 6-8" tall. Plants had tremendous growth making them tall and resulted in lodging that was noted. All plants had 3 beans per pod and were loaded with pods at every node. There was little to no disease to be noted. Seed size was larger than average. Overall, a really nice uniform plot.

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
