TEST COMMENTS: *Herbicide was applied a couple weeks prior to and again at planting. The site received rain shortly after crop planting giving a great start. The summer turned brutal. Significant heat stress and limited precipitation tested crop resiliency. At harvest, plants were short with the lowest pod being 4-8 inches above ground as the norm. Substantial Cercospora purple seed stain and poor seed quality here.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
