TEST COMMENTS: *Emergence struggled a little at this location, but the beans compensated well. Plants had excellent vegetative growth with little to no diseases to impact them all season long. Plants had long internodes with a lot of 4 pod clusters at each node. Seed size was large as well, which all helped to produce the yield levels that you see. Overall, a really nice plot.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
