TEST COMMENTS: This site was planted into no-tilled corn following a period of early May showers. Planting conditions were ideal which led to a great uniform stand. This site drains very well and was able to handle the 11" that fell during June alone. Fungicide was applied for plant health and insecticide for aphid control at R5. Plants were not tall but were loaded with 3 & 4 bean pods with large seed size. Great data.

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
