### TEST COMMENTS:

Corn planting in this area was about as good as you could get. These trials were planted into Brent's strip-till system by our RTK GPS plot planter. Showers followed in May through early July just enough to keep up with a crop that was accumulating GDUs quickly through that period. The following summer weeks were quite dry and rain was pretty rare during early reproductive stages. The early season test was located on Webster silty clay loam that did not hold moisture as well as the Canisteo clay loam where the full season and ultra-early tests were positioned. This may explain the lower average yields of the early season test at this site.
