### TEST COMMENTS:

The Grand Forks area had a wet spring, causing many acres to be prevent plant. Matt was only able to get 80 acres of corn planted this year. The area had a large rain event in June that caused stress in some fields, and they received a few three-inch rains throughout the rest of the summer but the ground was so dry it did no significant damage. There was a frost in early September that affected test weights in full-season hybrids, thus reducing yields.
