### TEST COMMENTS:

Planting was delayed in this area due to wet conditions carrying over from last season. The plot was planted into a previous Sugarbeet field that was unable to be harvested last fall due to inclement weather. This area of Minnesota was pounded with high volumes of rain throughout June/July, with this plot getting an estimated 30 inches of rain during the growing season. Depending on the field, yields were ranging from 10 BPA to 30 BPA. Due to high variability with low yields, the test data was rejected.
