### TEST COMMENTS:

Planting conditions were excellent with soil temperature at 61.0F and furrow moisture at 34.2%. Emergence was uniform and corn got off to a great start. The summer was hot with some dry periods that seemed to hurt the longer season hybrids on yield. Disease was not an issue. Some root lodging was evident on a few hybrids, and generally, only tops were out. The corn was standing well. The overall rating of the plot is an 8 out of 10. (10=best)
