### TEST COMMENTS:

*This location was planted a bit later in comparison to the rest of the region due to waiting on proper soil conditions. Nice and even plant emergence was seen and ample soil moisture helped throughout the vegetative growth of the plot. Cob size varied a bit within the plot and some tip back was seen. A dry spell the first two weeks of August with good temps helped hold off some of the foliar diseases, but the common ones were present. With all of the weather factors taken into account, the plot was very nice and uniform. All of the lodging noted was stalk and related to some wind later in the season.*
