TEST COMMENTS:

This was a great-looking plot almost the entire growing season. Emergence was nice and uniform and it caught some good rains in June and July. Then things started to deteriorate. Compared to the average, it was short almost 11" of rainfall for the growing season. After pollination a storm blew through producing 90+ MPH winds, causing some severe lodging. Stalk quality was still good enough at the time of harvest, that feeding into the corn head was not too bad. There was a small amount of Tar Spot on most hybrids.
