TEST COMMENTS:

This test was planted in mid-April and had great emergence. A good growing season and above-average rainfall promoted great yields. A late-season application of fungicide insured tremendous plant health. Plant height was shorter than normal, due to the cooler temperatures in May. There was no lodging across the test. The full-season test had a wetter spot in the last pass, that replicate was removed from statistics. Overall a good location with a new cooperater.
