TEST COMMENTS:

Soils were loose when we seeded this 4th-year corn-on-corn site. A frost on May 27 caused damage to some plots, but no lingering effect was seen at harvest. Paul said the worst of the frost missed the plot. A warm and dry June forced corn roots to grow deep, as rain did not arrive until just prior to and during pollination. Rains came just in time all season, with Paul stating this was his best crop ever. Last year was his previous best corn crop. The corn stood well, but Tar Spot showed up late in the season.
