### TEST COMMENTS:

We had very good soil conditions at planting -- right alongside our cooperater -- with good soil temps and dust flying. Emergence was uniform. Mid-June this site had above-average temperatures for a period stressing the crop. Nearly 9 inches of rain fell on June 25, pushing the total for June rainfall much above average. A dry bias after June settled in for the remainder of the season. Just like planting, we harvested this site alongside the Mull family. On the side of both tests, 1 rep was removed where yield depression occurred possibly from heavy rain.
