TEST COMMENTS:

Rainfall was spread out well enough throughout the season to keep corn plants going, however, the amount of precipitation from each shower was mostly limited to under an inch. Only one shower during the season surpassed an inch, which was 2.6" on Aug 31 during the tail end of grain filling. Plants were healthy during a mid-Aug visit and most ears were showing a little tipback, likely a symptom of dry conditions that impacted dryland fields in this area.
