TEST COMMENTS:

Planting on May 21 was pushing the maturity range for this location, which probably cost a few bushels yield. Soil temperature at 77.5F with furrow moisture of 34.4% got corn started fast. With above-average rainfall for the summer, corn never was stressed for moisture, but a lot of cloudy days did not help with maturing the crop. Gray leaf spot and anthracnose were present but fungicide applications helped. Diseases didn't hurt standability, just a few leaning plants for some hybrids. Although corn moistures were high, they shelled very nice. The overall rating of the plot is a 9 out of 10. (10=best)
