TEST COMMENTS:

The planting conditions were wet! We wanted to get started before more rain in the forecast. Furrow moisture was 38.0%, soil temperature was 65.1 F. Stands were reduced somewhat but overall emergence was very uniform and acceptable. Most of June was dry with scattered rainfall in July. Most of the summer could be summarized as hot with enough rainfall to keep the crop moving nicely. Heavy rainfalls came in August to finish the crop. Weed pressure was spotty and disease was kept in check with fungicide at planting and foliar. Corn was standing excellent at harvest. The overall rating of the plot is an 8 out of 10. (10=best)
