TEST COMMENTS:

Great planting conditions in no-till soybean stubble with furrow moisture of 32.5% and a soil temperature of 52.6F. Corn had a very uniform emergence and got off to a good start. Weed control was excellent. Summer was hot but rainfall was good for almost all of the summer. The only dry period was early in the season, which did help plants root down. Disease was light with gray leaf spot, anthracnose, and some northern leaf blight, but not enough to influence yield or standability. All corn was intact and standing excellent at harvest. Very nice plot! The overall rating of the plot is a 9 out of 10. (10=best).
