### TEST COMMENTS:

*Most likely the nicest and most uniform plot harvested year to date. Planted in minimum tillage following corn, stands were a little lower than expected. Soil temperature was 62.4F and furrow moisture was 32.9%. Corn started well and was under very little stress all growing season. Weed control was excellent and disease pressure was minimal with some gray leaf spot and anthracnose. At harvest time, wind gusts were in the 30mph range, but corn stood strong with only a few broken, mainly tops going out. The overall rating of the plot is a 9 out of 10. (10=best)*
