TEST COMMENTS:

There were excellent planting conditions, which contributed to even emergence. At harvest, the plot was in good shape with healthy stalks that stood well. The early season test had a better average yield because it sat lower in the field and benefitted from the extra moisture. In the late-season test, we saw a few plots that lodged and yields started to drop off as we climbed the side hill. The late-season test had some variable grain moistures from the change in soil conditions and drought. Overall there were good yields for a drought year.
