TEST COMMENTS:

This Moody silty clay loam near Pebble Creek has a history of producing tall beans when moisture is available. By June 20, 5 inches of rainfall had fallen and temperatures during the 2nd and 3rd week of June were in the 90's. All this heat and moisture led to rapid growth and very tall plants. Some wind that accompanied late-season storms did cause lodging which appeared to be variety specific. Green stems and slow harvest in this area were common this year.
