TEST COMMENTS:

Given the tough planting season this year, the plot was planted before the surrounding field into good field conditions. Tim said that they never missed any rains and had an excellent growing season, but they did notice some dicamba drift that affected some areas in the field surrounding the plot. During regular site visits during the spraying season, no signs of dicamba damage were noticed among any non-tolerant varieties in the plot. At harvest, some varieties displayed characteristic signs of white mold, causing some lodging that made for a difficult time harvesting. Bean size was large, and plants were exceptionally bushy depending on the variety. **REVIEW NOTE:** Due to drift nearby and slight but significant yield difference between RXF and non-tolerant varieties, the results will be excluded from the region summary report.
