TEST COMMENTS:

The year started with below-average subsoil moisture. Sufficient rains early in the spring did get the crop off to a good start but a drought remained during the rest of the growing season. In addition, Dicamba damage was noted and weed pressure caused variability in the stand. We were able to spray and get weeds under control for harvest. The soybeans were 18 inches tall at harvest and low yields were common in the area. Too much stress this year. Because of high yield variance, the results were rejected.
