PEST MANAGEMENT:	Lexar, Accuron Gt, Trivapro
FERTILITY - Applied N:	158 Spring
Applied N-P-K (units):	158-69-90

HARVESTED - STAND:	Sep 22 36.5 /A

TEST COMMENTS:

This conventional location was planted in early May. The test had great emergence and received timely rainfall throughout the growing season. Plant heights were normal and standability was excellent. Late season plant health was good, with most hybrids still having a few green leaves at harvest. Very consistent yields throughout, and the moistures were a little high due to the fungicide application. This location will probably be the best corn we will weigh in the Illinois South region this fall. Great test with a great cooperator.
