### TEST COMMENTS:

*This location is a light sandy soil. The corn was no-tilled into standing rye. There was very little rainfall after planting until sometime in July. When we were there to do stand counts, emergence was good, but the rye was still absorbing all the moisture left in the field. The plants were all wilted and looking really bad. It's amazing how one or two rains can change the entire season. Plant health was still good at harvest with little to no disease to note.*
