TEST COMMENTS:

This plot was planted in great soil conditions on the 26th of April and had excellent emergence. May and June turned dry in the area, and this plot got a 1" rain on June 29 which really helped the corn pull through. Timely rains for this area in July made a difference in reaching the plants' full potential. Excellent stalk quality and almost no lodging to speak of despite the location having a large storm with high winds during the growing season. A healthy and great-looking plot all around under a well-managed farming practice.
