### TEST COMMENTS:

*This minimum till trial was planted mid-April in dry, cool conditions. Early season warm rains established a perfect stand. This location received normal rains throughout the summer, which resulted in above average yields. There was no lodging or noticeable foliar disease throughout the trial. Plant heights were above average. Plant health was outstanding. Hybrids were hanging on to most of their green foliage. Fungicide treatment kept all hybrids very healthy and added a few points of moisture to the test. Overall a very good corn trial with a great cooperater.*
