TEST COMMENTS:

Greene was planted slightly later than desired due to the wet spring conditions. Soil conditions were good, with moisture at 60% field capacity and temperatures in the mid-60s. Field nutrients were lost due to the abnormally wet spring and early summer conditions. Rainfall was well above average in the first two months of the growing season, with 15.1" by July 16th. However, showers decreased, leaving the crop lacking moisture in the later growth stages. August and September were much drier than usual. As of harvest, the U.S. drought monitor has listed Butler County in a D1 - Moderate Drought. Local farmers have expressed that corn yields are at or slightly below average this year.
