### TEST COMMENTS:

*This location was planted in good soil conditions with plenty of moisture. Germination was very nice and uniform. Ideal growing conditions most all season long except for a minor wind event in June that caused a small amount of green snap in areas of this plot. The plants recovered well and showed very little lodging at harvest. August and September remained dry like much of the area. A very small amount of foliar disease was present throughout the location as well as some fairly heavy aphid damage in areas of this location resulting in plants dying before producing an ear.*
