TEST COMMENTS:

This plot was planted relatively early on May 2 in excellent soil conditions. At stand counts (V5) everything looked good and uniform. Rain stayed just above average for most of the growing season. But this area had very little rain after mid-August, helping drydown later in the season. The yields still looked nice, ears were filled out close to the tips and everything was standing very well. Cobs were nice and solid making shelling easy. A small amount of tar spot was present at the time of harvest, but was not yield-robbing.
