TEST COMMENTS:

This location was planted in a very nice seedbed and had very good emergence. The growing conditions in this area were ideal and made this plot grow extremely fast. Lots of vegetative growth quickly with not great stalk base made for heavy lodging across all varieties. Green Stem Syndrome was across the entire location with loads of green leaves still present making for an extremely difficult harvest. While most varieties still produced well there were a fair amount that trailed and had very small clusters with only one or two pods present.
